PROJECT TITLE :HOSPITAL TICKETING MANAGEMENT SYSTEM.

NAME :EUTYCUS WEKESA

REG 24/05834

SUPERVISOR :SAMUEL MUTHEE

COURSE : DIPLOMA IN INFORMATION TECHNOLOGY

BACKGROUND

Many hospitals face challenges in managing patient flow ,especially in out patient departments .manual queues increase the risk of misplaced tickets and reduce the efficiency of service delivery. Implementing an automated ticketing system can greatly improve operational efficiency ,provide reliable data for decision making and patient satisfaction .

DECLARATION

I declare that this project proposal is my original work and has not been submitted to any other institution for academic credit.

PROBLEM STATEMENT

The manual hospital ticketing system causes long waiting times , poor queue management , and inefficient service delivery .Patients experience delays , while hospital staff find it difficult to manage patients flow accurately .Thus this affects overall performance and patient satisfaction.

PROPOSED SOLUTION

The proposed solution is a Hospital Ticketing Management System that will automate patients registration , ticket generation and queue management .The system will assign unique tickets to patients ,organize queues electronically and allow hospital staff to serve patients effectively .

OBJECTIVES

- To develop hospital Ticketing Management System that improves patients flow and reduces waiting time
- To automate patient registration
- To improve queue management in hospitals
- To reduce waiting time
- To improve service delivery efficiency

Literature Review

Previous studies show that manual hospital system lead to inefficiency and delays .Related projects on queue management system indicate that computerized systems reduce waiting time ,improve accuracy ,and enhance service delivery .These studies support the need for an automated hospital ticketing system .

METHODOLOGY

The project will follow a structured system development approach . Activities will include requirement analysis , system design ,system development ,testing and implementation .Data will be collected through observation and review of existing systems .

TOOLS AND TECHNOLOGIES

Languages :PHP ,Python

Database :MySQL

Frontend: HTML,CSS , java script

Server : XAMPP

Tools :Text editor ,browser

BUDGET

Item	Quantity	Availability	Estimated cost (KSH)	Actual cost (KSH)	
Internet bundles	2 Months	Available	2,000	2,000	
Flash disk	1pcs	Available	1800	1,800	
Laptop maintenance	1 service	Available	1600	1600	
Printing and binding	3 copies	Available	1300	1300	
Electricity	2 months	Available	1500	1500	
Transport to hospital	2 months	available	2000	2000	
Total			10,200	10,200	

PROJECT SCHEDULE

Task no	Description	Expected start	Expected finish	Actual start	Actual finish		
1	idea	2/2/2026	8/2/2026	4/2/2026	6/2/2026		
2	Proposal presentation	3/2/2026	4/2/2026	4/2/2026	6/2/2026		
3	Proposal document	2/2/2026	9/2/2026	9/2/2026	13/2/2026		
4	SRS	2/2/2026	6/3/2026				
5	SDS	9/2/2026	9/3/2026				
6	System implementation	10/2/2026	13/3/2026				
7	Test plan	16/2/2026	16/3/2023				
8	Compiled system	23/2/2026	27/3/2026				
9	Final report	27/3/2026	27/3/2026				

CONCLUSION

- Provides reliable, efficient queue management
- Reduces waiting time and errors
- Improves patients satisfaction and record keeping
- Enhances operational efficiently.
